Teacher User Manual

A practical guide to the ImARs teacher portal

Class setup • lessons • quizzes • offline results • analytics

What you can do

01 Sign in and read the Dashboard

02 Set up sections and import students

03 Schedule lesson topics

04 Create and release quizzes

05 Prepare AR markers and sync results

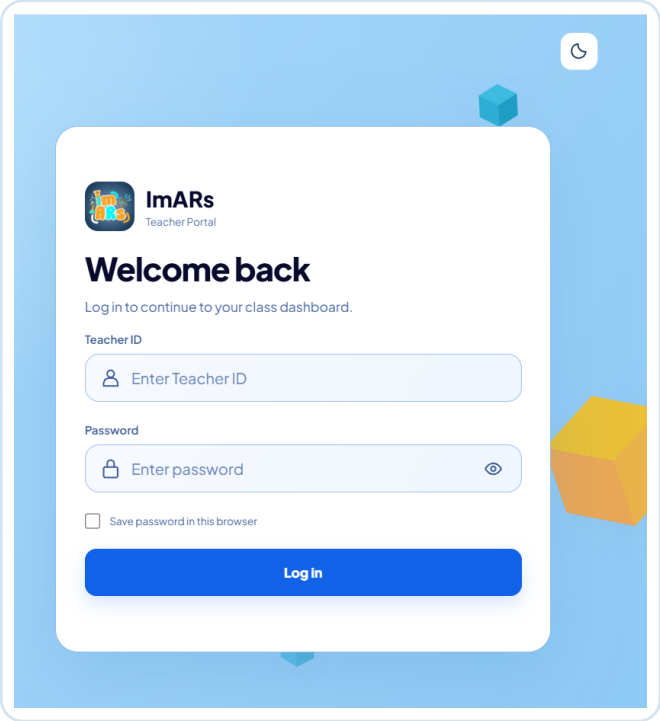

06 Review student records and Analytics

For teachers using the web portal • November 2026

Screenshots show representative teacher screens; labels may vary slightly by section.

01 Sign in and get oriented

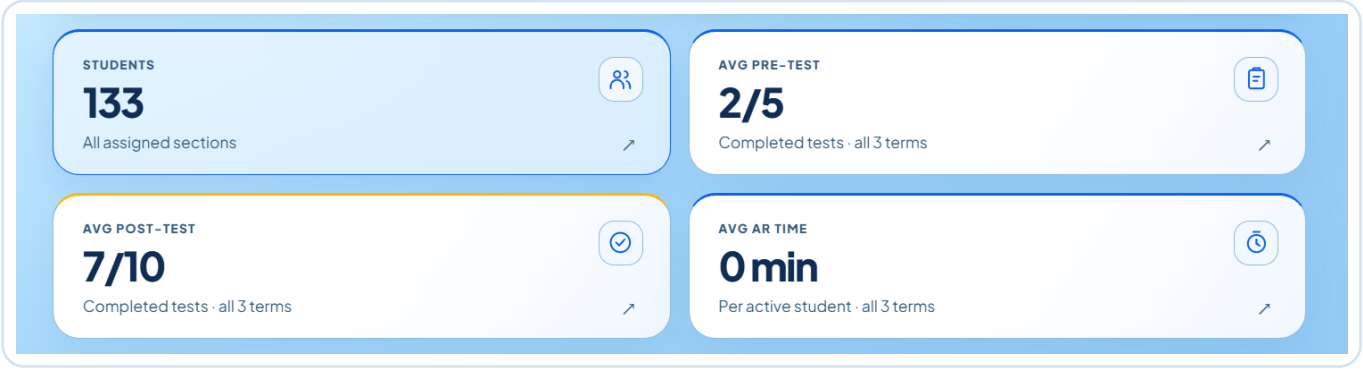

Open the teacher portal and enter the Teacher ID and password provided by your school administrator.

Teacher sign-in: enter your Teacher ID and password, then choose Log in.

On the Dashboard

1. Check the assigned section, active student count, average pre-test and post-test results, and AR time.
2. Use the menu or Quick Actions to open Batch Upload, Topic Scheduler, Quiz Generator, Student Records, Analytics, and Offline Sync.
3. Use the school-year control at the top when you need to view another year.

Dashboard summary cards give a quick view of class activity.

02 Set up your class roster

Import students into the correct section before scheduling lessons or reviewing results.

Quick Actions includes Batch Upload and other teacher tools.

Batch Upload

1. Open Batch Upload and choose the destination section. Create a section first if it does not appear.
2. Download the Excel or CSV template. Put one learner on each row using First Name, Last Name, Student ID, and Email.
3. Replace the example rows with your roster. Keep existing Student IDs exactly, including leading zeros.
4. Upload the file and inspect the preview: names, IDs, row count, and destination section.
5. Select Confirm Import. Wait for the success message, then open Student Records to verify the roster.

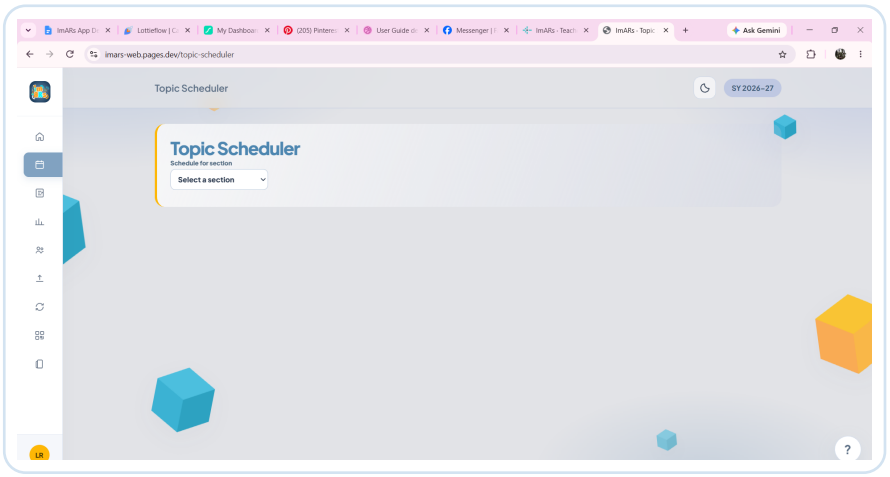

> **Student ID rule**
>
> A blank ID creates a new learner ID. Importing an existing ID updates that learner; it does not create a second record.

If the import needs correction

Fix the spreadsheet, check that the section is correct, and upload again. Review the preview before confirming. Ask the administrator for access if your teacher account has no linked section.

03 Schedule lesson topics

Topic Scheduler controls when students can open each lesson topic and its associated module and tests.

Start by choosing a section in Topic Scheduler.

Set dates and access

1. Choose the section. Expand a term to see its lesson topics.
2. Select Set date beside a topic. A future release date keeps it locked until that date; today makes it available now.
3. Use Lock or Unlock for a single topic, or Lock All / Unlock All for a term when you need a manual change.
4. Check the status displayed beside each topic before leaving the page.

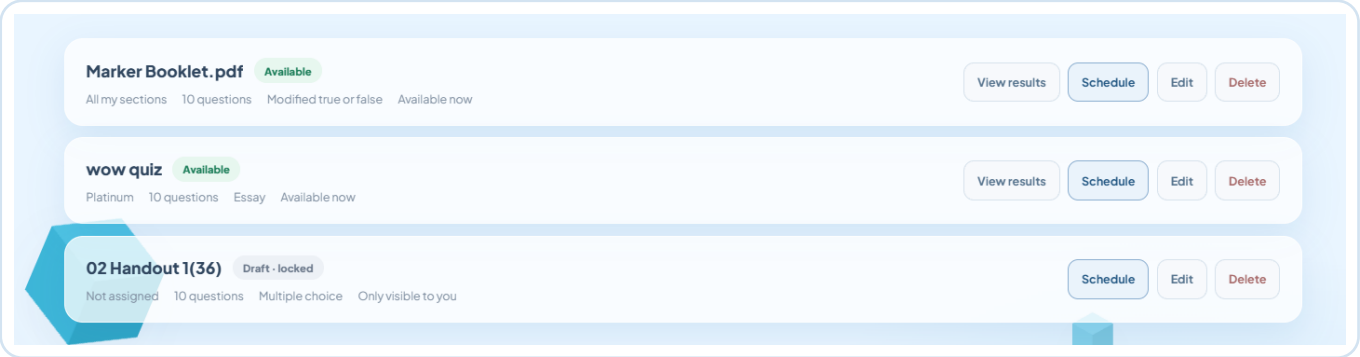

> **Date and manual access**
>
> A manual Lock or Unlock can replace a scheduled date. Recheck the release date after changing access.

Before the lesson

Confirm that the correct section and term are selected. Download the AR markers for the lesson and verify that students can access the topic at the intended time.

04 Create and release quizzes

Quiz Generator makes a draft from a learning material. Review every suggested question before students can access it.

My quizzes shows each quiz, its status, and actions such as Schedule and Edit.

Create a quiz

1. Open Quiz Generator and select Create a quiz.
2. Upload a PDF, DOCX, or PPTX learning material (up to 10 MB). Enter the title and choose a section.
3. Choose question count (1–50), question type, and difficulty, then generate the suggestions.
4. Read each question and answer. Accept, edit, or discard suggestions as needed.
5. Save as a locked draft, make it available now, or schedule its release.

Check access before class

Open My quizzes or the Generated quiz schedule to verify that the intended section and release status are correct.

05 AR markers and offline results

Prepare the classroom materials in advance. The web portal receives results that students complete in the mobile app.

Quick Actions links to Download AR Markers and the other teacher tools.

Download AR markers

1. Open Download AR Markers from Quick Actions or the menu.
2. Download the marker ZIP and extract it before class. Print or share the markers needed for the topic.
3. A downloaded marker confirms that the file is ready; it does not indicate a student grade.

Sync a student’s offline results

1. On the student mobile app, open the Grade QR code after completing offline work.
2. On the teacher website, open Offline Sync and scan the QR code or upload a clear image of it.
3. Check the learner name, ID, averages, and lesson breakdown shown in the preview.
4. Wait for the “All Terms & Lessons Synced!” confirmation before treating the results as saved.
5. Open Student Records or Analytics to confirm that the new results appear.

> **If the website says “Displayed from QR (Offline Mode)”**
>
> The code was read, but that message is not a save confirmation. Connect the teacher device to the internet and retry the sync.

06 Review student records

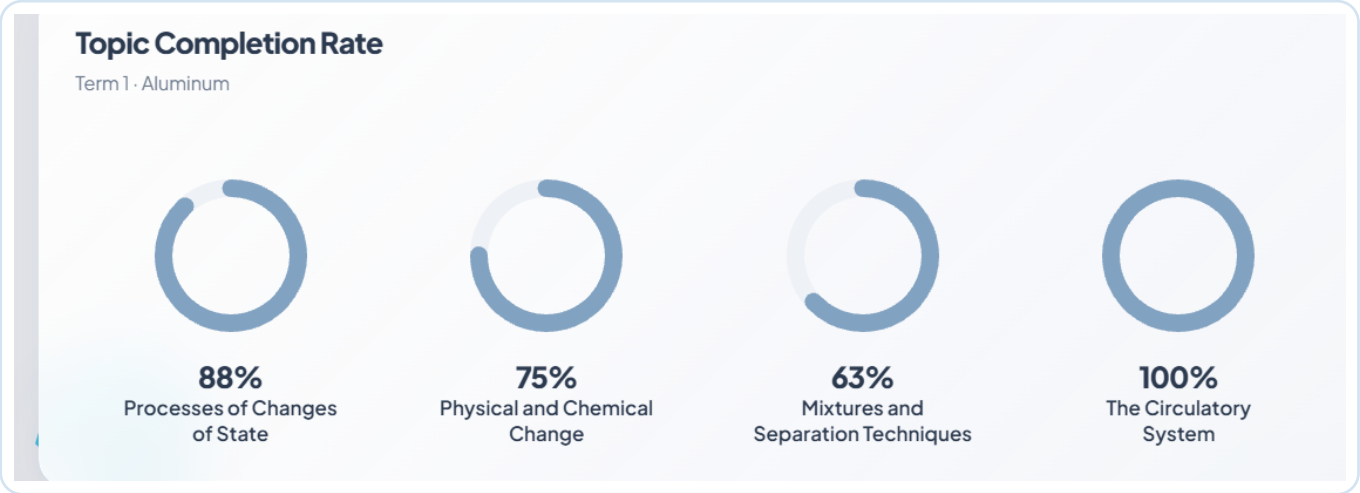

Student Records provides a learner-level view of progress and engagement.

Find and inspect a learner

1. Open Student Records from the menu.
2. Choose a section or use Search student to find the learner.
3. Review AR time, module time, pre-test, post-test, and overall performance.
4. Open the learner's detail when you need a topic-by-topic view. Check the displayed term and section.

Interpret the results

Pre-tests contain 5 questions, so an individual completed pre-test changes in 20-point steps. Post-tests contain 10 questions, so an individual completed post-test changes in 10-point steps. Averages across learners or topics can have other percentages.

Analytics can show completion rates for the selected term and section.

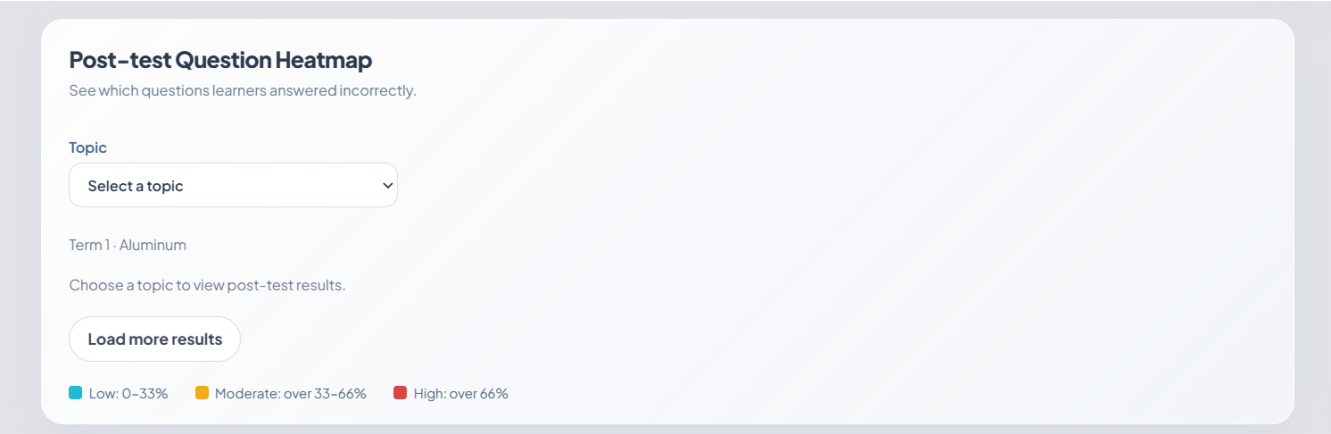

> **Missing result**
>
> A dash means no completed result is available in that view. Confirm the correct section, term, and completed sync before investigating further.

07 Use Analytics to plan support

Analytics combines class summaries and learner results. Select the correct section, term, and topic before interpreting a chart.

What to review

1. Compare average pre-test and post-test scores to see class change.
2. Use the individual student table to find learners who may need follow-up.
3. Check Topic Completion Rate for lessons with unfinished work.
4. Choose a topic in the Post-test Question Heatmap to see which questions learners missed most often.

Heatmap colors represent the share of incorrect answers: low, moderate, and high.

Reading the heatmap

Low means 0–33% incorrect, moderate means over 33–66%, and high means over 66%. A darker or higher category points to a question worth revisiting in class.

Quick reference and troubleshooting

Common checks

No students after import

Confirm the destination section, review the upload preview, and wait for the import success message.

Topic unavailable

Check the selected section, scheduled release date, and manual Lock status in Topic Scheduler.

Quiz invisible to learners

Open My quizzes or Generated quiz schedule. Verify the section and whether the quiz is draft, scheduled, or available.

Offline result missing

Reconnect the teacher device, scan the Grade QR again, wait for the sync confirmation, then refresh Student Records.

Chart seems wrong

Confirm school year, section, term, and topic. Remember that class averages need not match one student’s test increments.

Typical teaching flow

Sign in → check Dashboard → import the roster → schedule topics → prepare AR markers → create and review quizzes → teach → sync offline results → review Student Records and Analytics.

Need help?

Use the built-in Teacher Manual in the portal for the latest on-screen steps, or contact your school administrator for account and section access.
